Exceptional features and a wide range of use

Markets, stands,
mobile selling

Fast food, Snack-bars

Small stores, butchers,
Grocery stores

Hairdressing salons,
Barbershops, beautician
studios

The Euro-50 Mini is designed particularly for smaller shops and mobile selling activities such as in markets, car parks, rent collection, food services, small cafeterias and sweetshops as well as hairdressing salons, fitness centers and the like. The cash register's timeless and elegant look will leave your customers with the impression of a modern business.

It has never been so easy!

The Euro-50 Mini offers a completely new way of cash register programming through a simple and intuitive menu that allows for easy control of the register as well as the rapid training of new personnel.

Become truly mobile!

Thanks to a battery that can be replaced without disassembling the cash register, that operates up to 12 hours of continuous registering and that recharges in as little as 3 hours, you become truly mobile and independent of the electricity network.

Keep the cash register on hand at all times.

Its small size and low weight make it an truly portable cash register. Using the easily attached strap, the register can be carried around the neck or over the shoulder and a stable position can be found on the table of any shop.

Resistant keyboard with exceptionally large keys.

Important features of this portable cash register include less dust between the keys and the keyboard and easier maintenance, both of which facilitate work in the field and reduce overall maintenance.

Rapid data transfer.

The Euro-50 Mini has a built-in SD card slot for exporting and importing data directly to and from your computer for easier programming of items and departments or for downloading of electronic journals, if you don't have a PC directly in your shop. During cash register software upgrades, you can easily store and then restore your data.

Simple text correction.

The cash register also allows you to make text corrections, rewrite text and insert characters through the text editing function. You can also set up a numerical scheme for easier and faster programming of the Euro-50 Mini when programming in figures.
